

SD-WAN

The Next Generation of Network Connectivity

With Software Defined Wide Area Networking, SD-WAN, from Telesystem, businesses can take control of their network by **reducing complexity** and **costs** and **improving application performance**.

Traditional WANs are designed to connect your office to others around the world

However:

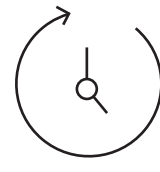

Traditional WANs were **NOT** designed for today's demands for

- ▶ Increased flexibility
- ▶ Responsiveness
- ▶ Security
- ▶ And Control

SD-WAN is the best way to build and manage long distance networks

smarter

faster

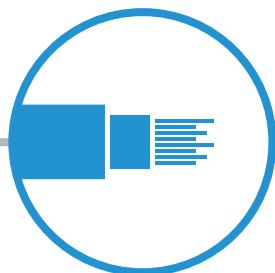

lower cost

With SD-WAN, your business can take advantage of a variety of transport options:

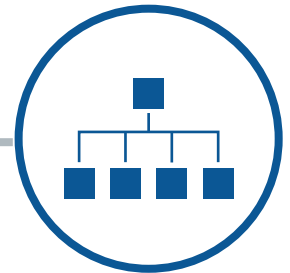

Broadband

DIA
Dedicated Internet Access

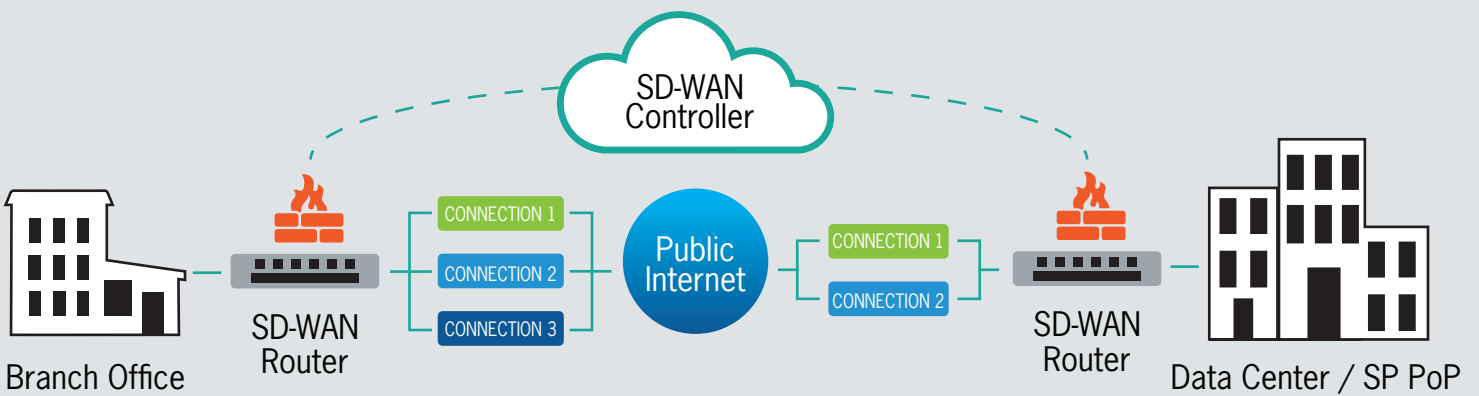

LTE
4G Wireless

Private MPLS

SD-WAN

takes all of these transport types and makes them part of a common encrypted network - managed by software

SD-WAN Enables You To:

See Every Application on Your Network

Prioritize & Control Applications

Virtually Eliminate Outages

Add Bandwidth & Locations Quickly & Cost Effectively

Efficiently route traffic on the best path available based upon the application priority YOU define
